

First CSS Page

1. Download and open the firstcsspage.htm file attached
2. Fill in the meta information in the head section of the web page (mainly, include your name) – **this will be implied in all future webpages that we create from here on out**
3. Preview the webpage in your browser, after each step, refresh your page and see how your webpage has change. This will be imperative to your learning through these activities
4. The first step is to add the opening and closing style tags in the head section so we can include internal CSS

```
<style type="text/css">  
  
</style>
```

5. Now adding our first CSS rule. We are using the paragraph selector – p – and are going to change the font-family property to the value of Arial

```
<style type="text/css">  
  
p {  
  font-family: Arial; }  
  
</style>
```

6. Refresh the page and see how it changed both paragraph. No need for inline CSS anymore when changes can be applied all at once.
7. Create a new rule for the level 3 heading using the – h3 – selector. We are going to make the color properties value blue

```
h3 {  
  color: blue; }
```

8. Again, make sure to preview the page to see the changes (I will stop reminding you to do this now – you should save and preview after every step!)
9. Write a new rule using the level 1 heading selector. Change the font-size to be a value of 50px and change the font-family property to be the value of Copperplate (also provide a fall-back font of sans-serif, which is good practice)

```
h1 {  
  font-size: 50px;  
  font-family: Copperplate, sans-serif; }
```

10. Finally – change the whole web page's background color to #EEEEEE. To do this, use the – body – selector and the background-color property

```
body {  
background-color: #EEEEEE; }
```

11. Congratulations! You made your first CSS webpage!

THE IS A TITLE OF THE PAGE

This is a placeholder paragraph so that we can practice using our first CSS rules and font properties

This is a Subtitle

1. Item 1
2. Item 2
3. Item 3
4. Item 4

This is Another Subtitle

This is the final placeholder paragraph so that we can practice using our first CSS rules and font properties
